

## Gender in Times of Corona – 2 - 31 March 2020 www.genderengezondheid.nl

Dear NVG&G-members,

In this newsletter, and to the best of our knowledge, we aim to provide an update of the latest sex- and gender-related knowledge, literature, and news on Covid-19 and sex/gender. We still need your help! Please send us resources, links to media outlets, literature, etc, so that we can disseminate quickly (<u>info@genderengezondheid.nl</u>). Our focus is not on the biological and medical aspects of the outbreak alone, but rather we aim for a broad overview and understanding of coronavirus COVID-19 and how it is related to sex and gender (see Figure 1).

We will collect the information and disseminate it to the gender and health community and our members. Thank you so much in advance! Stay safe, and warm regards,

on behalf of the board NVG&G, Petra Verdonk, Aletta Oosten, Maaike Muntinga info@genderengezondheid.nl

(2020)               | Coronavirus disease 2019:<br>the harms of exaggerated<br>information and non-<br>evidence-based measures.<br>European Journal of Clinical<br>Investigation, Editorial<br><u>https://doi.org/10.1111/eci</u><br>.13222 | https://onlinelibrary.wiley.com/doi/abs/10.1111/eci.<br>13222 | Abstract: The evolving coronavirus disease 2019 (COVID-19)<br>pandemic is certainly cause for concern. Proper communication<br>and optimal decision-making is an ongoing challenge, as data<br>evolve. The challenge is compounded, however, by exaggerated<br>information. This can lead to inappropriate actions. It is important<br>to differentiate promptly the true epidemic from an epidemic of<br>false claims and potentially harmful actions. |

| World Economic Forum, 12<br>March 2020<br>X     | The coronavirus fallout may<br>be worse for women than<br>men. Here's why.  | https://www.weforum.org/agenda<br>/2020/03/the-coronavirus-fallout-<br>may-be-worse-for-women-than-<br>men-heres-why/ | Women comprise the majority of health and social care workers. Mass school closures particularly affected women because of responsibility for childcare. Women already do three-times as much unpaid care work than men – and caring for relatives with the virus. Research from China suggests that while COVID-19 is infecting men and women equally, women are less likely to die than men. A study from the Chinese Center for Disease Control showed the death rate among men was 2.8%, compared with 1.7% for women. |

| China Current                      | Audio report on 'the<br>Gender question', with<br>Sarah Hawkes  | https://chinacurrent.com/story/19<br>668/the-gender-question-the-<br>novel-outbreak   | Gender is always critical and again in the COVID-19 pandemic. Early data shows high-<br>risk groups including the ageing population and those with underlying health issues<br>such as long-term heart, liver, kidney and lung disease. But we are also beginning to<br>know that men are more susceptible to infection, though the reasons for this are not<br>clear. At the same time, with women making up the majority of the world's health<br>workforce, what is the opportunity here to create a new movement for equality, so<br>that the legacy of COVID-19 can produce some meaningful good for all of us? |  |
