

Sender's declaration for biological samples

This package contains receptacles with biological samples (serum, plasma, CSF, tissue, extracts, ...) of the following origin (please describe as detailed as possible):

--

Extracts are stored in safe-lock or safe-seal polypropylene vials (no screw cap vials!) to rule out any leakage. Surface contamination of vials and outer packaging can be excluded.

Extracts have been prepared as described by the standard operating procedure (SOP) in **Excel order form**, sheet "Sample Treatment" (please do not forget to fill it in!).

Extracts of bacterial or viral origin have been appropriately inactivated in order to ensure that the samples are **non-hazardous, non-infectious, and free from living organisms**.
